

ENGINEERING: CAD-design and CAD-construction

Engineering services can be performed by the latest generation of CAD-methods. We are familiar in using existing design data (i.e. piping material classes) and/or generate new data sets as well.

The operation of the ODBC interface and attached tools under the operating systems MS-Windows make it possible to point out partial project data from the database, which can be used in further tasks.

Tools for project data:

ORACLE
MS-Access
MS-Excel

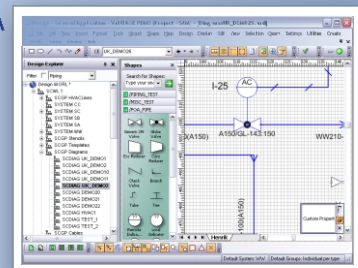

CAD basic tools:

Microstation
AutoCAD

Applications:

PDMS Plant Design Management System / AVEVA
PDS Plant Design System / Intergraph
Pro/ENGINEER
ISOGEN / Alias
PIPECAD / AVEVA
2D- und 3D-PIPE / CADISON
GENIUS
SPEEDIKON

Our CAD-workstations are on the latest ergonomic and technical level.
