

CAE-consulting, training und adaptation

CAE-consulting

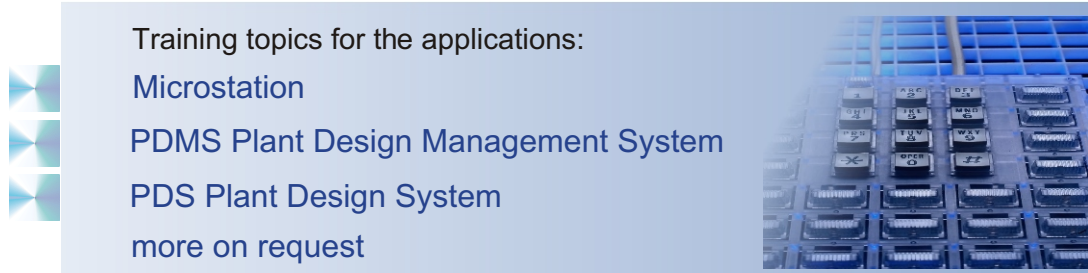

The growing requirements on systems in the CAD/CAE area make it more and more difficult for the user to find the best solution.

Our major goal in this area is to support our customer in finding the right decision by qualified consultancy. Here we use our experience on complex applications and systems (client/server configurations).

CAD-training

In our CAD-Training centre engineers and technicians are constantly being further educated and instructed. On special request we realise CAD-training courses in the familiar environment at the customers company. The special prerequisites for the training will be individually elaborated.

CAD-adaptations

In case of special requirements we are able to make our own applications for standard-CAD/CAE-Systems.
